

BICYCLE ERGOMETERS FOR TRAINING

# *optibike basic / plus*

***ergoline***  
MOVING TO HEALTH

## *optibike basic / plus*

The ideal training ergometer for in-home and therapeutic use.

Different forms of training (heart-rate controlled, constant load, interval training) can be programmed easily and are conveniently supported.

The optionally available digital chest strap ensures reliable acquisition of the heart rate.

Completed training sessions can be saved on a chip card and analyzed on the PC.

Our *optibike* ergometers are particularly well suited for orthopedic patients thanks to their low step-through access.

Learn more about *optibike basic* – with  
360° view and technical features.

- broad open step-through frame
- high-precision load unit (medical device)
- seat height seamlessly mechanically adjustable
- adjustable handlebar (360°)
- patient weight up to 160 kg
- user-friendly interface
- variety of training protocols
- manual operation/ Quick Start function
- 6 to 450 Watts
- wide range of expansion options

with 360° view and technical features.

## *ergoline* training ergometers optibike

### optibike basic

The optibike basic is operated with just 4 keys.

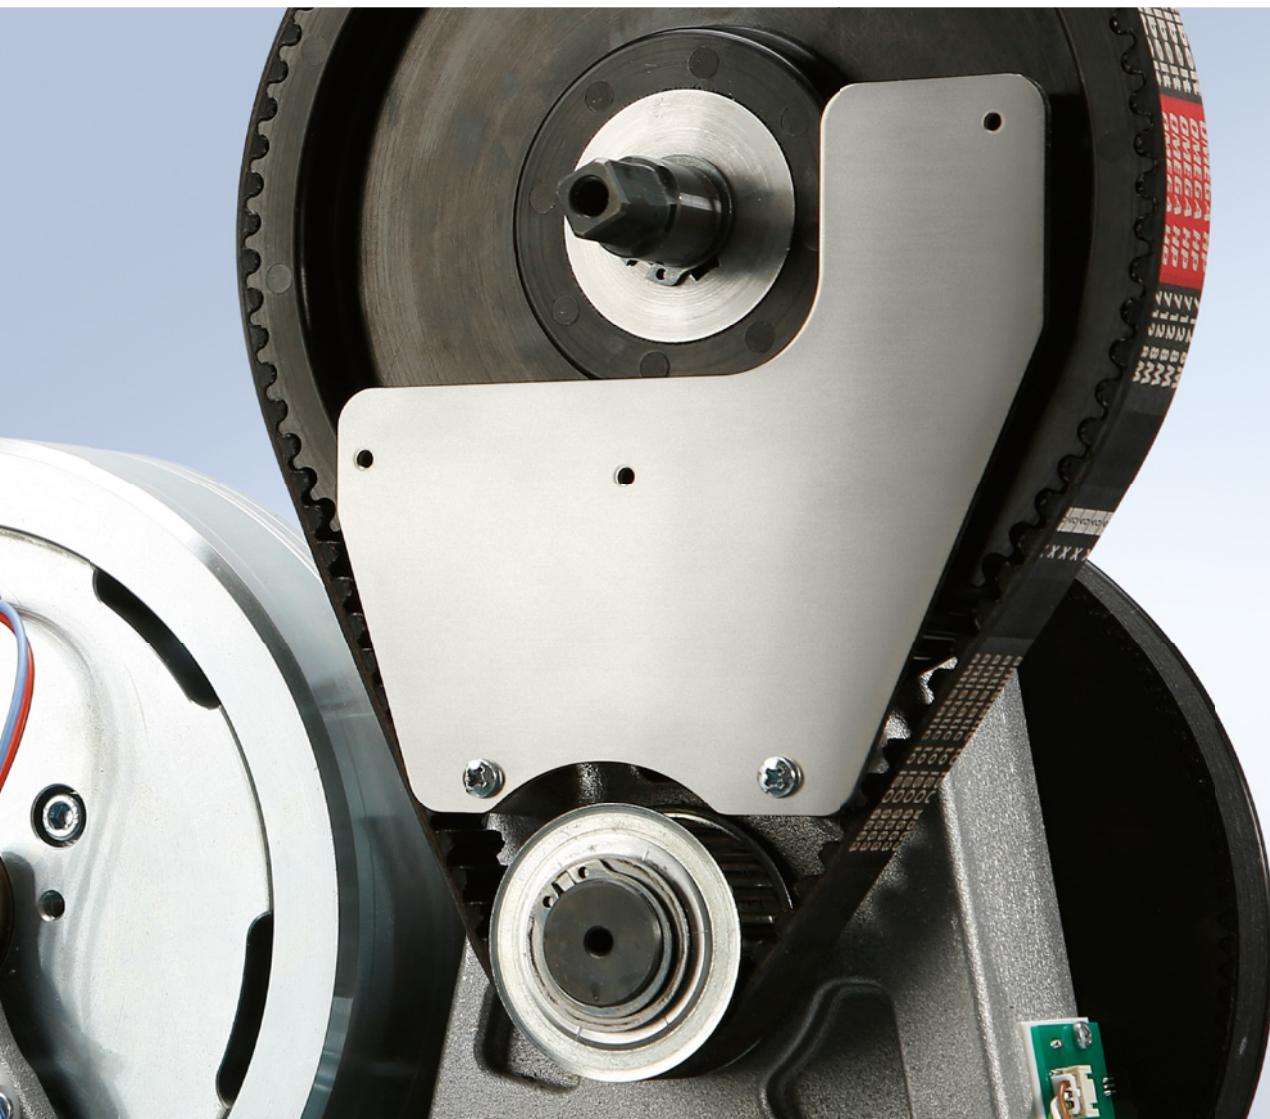

After selecting the desired training format (manual, countdown or pulse-controlled cardio training), all relevant parameters (including load, speed, heart rate) are shown on the LC display during training.

### optibike plus

The large color touchscreen display of the optibike plus offers an intuitive user interface for ease of use.

The large colorful graphic display shows all important training data, with heart rate and load curve diagrams.

## **ergoline** training ergometers optibike

### **Integrated chip card unit**

Training protocols defined on a PC are programmed by the ergoline training card via the integrated chip card reader (optibike plus).

After completion of the training, the optibike automatically saves the results on the training card.

The data can then be read, saved and printed on the PC (opticare basic software).

### **Cardio set for heart rate detection**

Uninterrupted, reliable acquisition of the heart rate is indispensable for conducting heart-rate controlled training.

The digital ergoline chest strap allows for the unique allocation of the strap to a patient — the "inadvertent" transmission of another person's strap signals is completely ruled out.

As an alternative, a cardio set with POLAR® components is also available.

### **Filing tray**

All optibike ergometers can be equipped with a basket, for example to hold a water bottle or a towel.

### **Whisper-quiet drive technology**

The 2-stage belt drive of the load unit, specifically developed by ergoline, guarantees quiet and slip-free operation – even at high loads. The electronically controlled eddy current brake ensures that the wattage settings are followed precisely (in accordance with medical device standards).

All axes run on high-quality, permanently lubricated precision ball bearings. This ensures whisper-quiet, smooth operation even after years of use.
